

HOW TO RUN CULTURATI:

REPOSITORY LINKS:

<https://github.com/itstalalsalman/culturati-cms>

<https://github.com/AyeshaNizam-5/culturatiDemo/tree/frontend-goktug-2>

✓ 1. Clone & Run the Spring Boot Backend

Pre-requisites:

1. Java 17 or higher installed
2. Maven installed
3. PostgreSQL installed
4. (Optional but helpful) pgAdmin installed
5. Git installed

Steps:

- bash
- Copy
- Edit
- # Clone the repository
- `git clone <your-backend-repo-url>`
- `cd <your-backend-repo-folder>`
- # Example:
- `# git clone https://github.com/your-org/culturati-backend.git`
- `# cd culturati-backend`
- Set up application properties
- Check for `src/main/resources/application.properties` or `application.yml`. You need to set:

properties

Copy

Edit

Example (application.properties)

`spring.datasource.url=jdbc:postgresql://localhost:5432/culturati`

`spring.datasource.username=postgres`

`spring.datasource.password=your_password_here`

`spring.jpa.hibernate.ddl-auto=update`

Replace your_password_here with your actual PostgreSQL password.

- Run the Spring Boot app
- bash
- Copy
- Edit
- # Run with Maven
- ./mvnw spring-boot:run
- # OR if you have Maven installed globally
- mvn spring-boot:run
- If successful, the backend should start on <http://localhost:8080>

✔ 2. Set Up PostgreSQL + pgAdmin

1. Install PostgreSQL
2. Download from: <https://www.postgresql.org/download/>
3. Set a password for the postgres user (e.g., postgres or your_password)
4. Install pgAdmin
5. Download from: <https://www.pgadmin.org/download/>

✔ 3. Import Database Backup in pgAdmin

Steps:

1. Open pgAdmin and login
2. Server: localhost
3. Username: postgres
4. Password: (your set password)
5. Create a new database
6. Right-click on Databases > Create > Database...
7. Name: culturatiDB
8. Save
9. Restore backup:
10. Right-click on the culturatiDB > Restore...
11. Format: Custom or Tar
12. Select your .backup file
13. Click Restore
14. Wait until it finishes. You should see all tables populated.

✔ 4. Login as superadmin1

1. Default credentials (already inserted via seed or dump):
2. Username: superadmin1

3. Password: testadmin1
4. Steps to log in:
5. Start your frontend (npm run dev or similar)
6. Go to the login page: <http://localhost:5173/login> or similar
7. Enter the credentials above
8. Upon login:
9. You will be redirected to the super admin dashboard (/dashboard)
10. From here, you can:
11. Create institutions
12. Create users under those institutions

✔ 5. Creating Institutions & Users

Steps:

1. Navigate to the Super Admin Dashboard
2. Use the "Create Institution" form
3. Name, Type, Code, etc.
4. Then go to the "Manage Users" or "Create User" page
5. Choose the institution
6. Set role (admin, editor, data_entry, etc.)
7. Save the user
8. The created user can now log in using their own credentials and will be routed based on their role.
